

**THREE-PHASE PROGRAMMABLE
PHANTOM POWER SOURCE**

Energoforma 3.3-12

Output signal:

Current — up to 12 A

Voltage — up to 264 V

Harmonics — up to 50th

Interharmonics — up to 50.5th

SW «EnForm»

Sphere of Application

Together with reference standards Energomonitor 3.1KM or Energomonitor 3.3T1, Energoforma 3.3 makes up the test system meant for testing, calibration and adjustment of:

- Energy meters
- Power quality analyzers (IEC 61000-4-30-2008)
- Instrument (measuring) converters
- Instruments for various electrical measurements.

Functionality and Options

1. Calibration of single- and three-phase energy meters

Accuracy class of meters under test	0.5S	0.2S	0.05
Reference standards	EM3.3T1 	EM3.1KM-P-0.5 	EM3.1KM-P-0.2 

Scanning Head

Software «EnForm»

2. Calibration of instrument converters

Current/ Voltage-to-Frequency Converter

3. Calibration of power quality analyzers

Energomonitor 3.1KM-P-0.5 (0.2)

Time Correction Module TCM-02C

Operating Modes

1. Off-line mode (control from keypad)

1.1. Standard signals

Energoforma generates a three-phase balanced sinusoidal signal. The angles between phase voltages are set to 120°.

Programmable parameters:

- Fundamental frequency (42.50 to 70.00 Hz in 0.01 Hz steps)
- Phase angles between current and voltage (for all phases) (from -179.99° to +180.00° in 0.01° steps)
- RMS voltage (from 1 mV to 264 V in 1 mV steps)
- RMS current (from 0.01 mA to 12 A in 0.01 mA steps).

Standard signal	
F :	50.00 Hz
AngleUI :	30.00 °
U :	70.000 V
I _A I _B I _C :	0.50000 A
U _A U _B U _C :	50V
I _A I _B I _C :	50A
Power :	220V
Power :	50A

1.2. Special (user-defined) signals

The settings are made separately for each phase.

The ranges of settings are the same as in the standard signal mode.

Frequency*

Phase angles

Voltage and current (RMS)

RMS 1st harmonics:

U _A :	70.000 V
U _B :	70.000 V
U _C :	70.000 V
I _A :	0.50000 A
I _B :	0.50000 A
I _C :	0.50000 A

* Waveforms can be generated synchronously with mains frequency.

Wave shapes

The screens representing the wave shapes of signals being generated can be of 4 types:

- Oscillogram
- Linear spectrum
- Logarithmic spectrum
- Spectrogram reflecting phase shifts of harmonics with respect to the fundamental.

Oscillogram

Interharmonics are off

Interharmonics are on

Linear spectrum

Logarithmic spectrum

Harmonics phase shift

Subharmonics

Phase control

Signal shape (T is the period)

Signal shape (T is the period)

Dips and swells

Flicker

Library*

* 8 libraries with the capacity of 5 test signals per each.

2. PC-controlled mode

As part of MTS ME 3.1KM (or -3.3T1)-P test systems, Energoforma is controlled from a PC via EnForm or EnForm/MTS programs.

Specifications

Parameter	Characteristics		
	Output setting range	In increments of	Max deviation from the set value
Frequency of the fundamental harmonic (f_1), Hz	45.0...70	0.01	Absolute: ± 0.01
Phase angle between <ul style="list-style-type: none"> • Fundamental harmonics of phase voltages in different phases, degrees • Fundamental harmonics of current and voltage in the same phase, degrees 	-179.99 ... +180	0.01	Absolute: $\pm 2^\circ$
RMS of the fundamental harmonic of voltage (U_1), V (at the rated load)	20...264	0.01	Relative: 1 %
Output power of the Voltage source, VA (at a load of 4.8 kOhm)	10	—	—
RMS of the fundamental harmonic of current (I_1), A	0.01...12	0.0001	Relative: 1 %
	0.001...0.05		Relative: 2 %
Output power of the Current source, VA (at a current of 10 A, $R_{NOM} = 0.05$ Ohm)	5	—	—
Total harmonic distortion of voltage and current, %	—	—	Relative: 1 %, or less
Harmonic composition of the current and voltage signals:			
Harmonics (number: 49)	2...50	0.01	—
Interharmonics (number: 51)	0.5; 1.5; ...; 49.5; 50.5		
RMS value of the current or voltage harmonic, % of U_1 or I_1			
For harmonics from the 2 nd to 19 th	0...100	0.01	—
For harmonics from the 20 th to 50 th	0...50		
For interharmonics (from the 0.5 th to 50.5 th)	0...15		
Phase angle between: <ul style="list-style-type: none"> • The 1st and nth voltage harmonic in the same phase, degrees • The 1st and nth current harmonic (interharmonic) in the same phase, degrees 	-179.99 ... +180	0.01	—
Number of voltage dips or swells	0 to 100 000	1	
Duration of a voltage dip or swell (t), s ($f_1 = (50 \pm 1)$ Hz)	0 to 600	0.001	Absolute: ± 0.002
Event repetition period (interval between adjacent dips or swells) (T ; $T \geq t$), s ($f_1 = (50 \pm 1)$ Hz)	0 to 600	0.001	Absolute: ± 0.002
RMS value of voltage during a dip (U_{min}), % of U_1 ($f_1 = (50 \pm 1)$ Hz)	0 to 9.99	0.01	—
	10 to 29.99		Relative: $\pm [1.0 + 0.5(U_{NOM}/U - 1)]$ %
	30 to 100		Relative: ± 1 %
RMS value of voltage during a swell (U_{max}), % of U_1 ($f_1 = (50 \pm 1)$ Hz)	100 to 200	0.01	Relative: ± 0.5 %

General

Parameter	Value
Mains supply	220 \pm 22 V, 50 \pm 0.1 Hz
Power consumption	250 VA, or less
Dimensions (L x W x H)	Maximum 500 x 450 x 200 mm
Weight	12 kg, or less

Environmental

Ambient temperature	10 to 35 °C
Relative humidity	80 % (25 °C)
Atmospheric pressure	70 to 106.7 kPa
